Success! Created primerapp at D:\Andy\Documents\Coder House\React js\primerapp
Inside that directory, you can run several commands:

  npm start
    Starts the development server.

  npm run build
    Bundles the app into static files for production.

  npm test
    Starts the test runner.

  npm run eject
    Removes this tool and copies build dependencies, configuration files
    and scripts into the app directory. If you do this, you can't go back!

We suggest that you begin by typing:

  cd primerapp
  npm start

Happy hacking!

D:\Andy\Documents\Coder House\React js>
```
Edit `src/App.js` and save to reload.
